

UNIQUE ASPECTS OF MORAL AND MORAL EDUCATION OF STUDENTS DURING EXTRACURRICULAR ACTIVITIES

Boboyev Xamdam Ataxanovich

Abstract:

Education is the process of imparting to others the positive skills of the lessons and intellectual potential of every person in the process of living in life.

The need to improve educational activities in the concept of extra-curricular and extracurricular educational activities is emphasized: the change of the political system, the formation of new economic relations, the development of new principles, ideas, work methods and ideas that meet the requirements of the era in the improvement of educational work. it is necessary to rebuild the creative activity of the teacher.

A new attitude to educational work based on the spirit of independence is reflected in the decisions of the government, in the reforms of the public education system, in the research of scientists and creative teachers.

Our first President I.A. Karimov wrote in his excellent pamphlet "The main principles of the political, social and economic perspective of Uzbekistan":

"The first and biggest patron of such industries, which are as necessary as water and air for the future of our people, is the state itself. "Spirituality is a very delicate educational field, it cannot be left to self-discipline."

The achievement of independence of the Republic of Uzbekistan and its independent political, economic and social path, with the education and upbringing of the young generation growing in various sectors of the national economy, including the public education system requires a reconsideration of the process of existence.

Currently, based on the latest achievements of science and culture, it is extremely necessary to search for effective forms and methods of preparing the young generation, who are our future, for life.

According to the decree of the President of the Republic of Uzbekistan "On further improvement of the activity and efficiency of the public center "Spirituality and Enlightenment", the development of high moral qualities in the society, formation of national ideology, youth with rich cultural Education in the spirit of respect for our heritage, historical traditions, universal human values, love for the Motherland,

loyalty to the ideas of independence is the decisive factor of all the reforms implemented in our country.

Increasing the effectiveness of educational work outside the classroom and outside of school depends on finding and implementing the most modern and convenient ways of forming a perfect person. This concept is also aimed at determining the stages of personal development.

In order to make educational work meet the requirements of the times, it is necessary to reconsider all the ideas that are the basis of education, to focus on the child's personality, and to use the positive experience accumulated over the years.

Educational work is carried out in cooperation with law-enforcement bodies, creative associations, state and non-state funds, committees and organizations.

In addition to the educational activities conducted by the school with students, various educational activities are called extracurricular activities. Extracurricular activities are a component of the school educational process and one of the forms of students' free time.

Extracurricular and extracurricular activities have a wide range of opportunities to develop a person in all aspects and prepare him for active life. These activities are organized on a voluntary basis according to the children's interests. Pupils choose activities that interest them in classroom and extracurricular activities and participate in them on their own initiative.

Determining the organizational work, content and purpose of school and non-school institutions requires taking into account all aspects of our day. These educational activities outside the classroom and school are characterized by the fact that they are aimed at determining the stages of personal development. In order to positively solve this problem, in addition to the classroom and school, the following should be included in the system of educational work:

- relying on unique traditional means of forming mutual respect between pedagogues and students;

it is necessary to recognize the personality of a growing person as a high social value in education, to respect the uniqueness and uniqueness of every child, teenager and young man, to take into account the social right.
