SELECTION OF MULTIMEDIA PRODUCTS IN THE ORGANIZATION OF EDUCATION CLASSES ACCORDING TO MODERN REQUIREMENTS AND SCIENTIFIC METHODOLOGICAL BASES OF EFFECTIVE ORGANIZATION OF CLASSES USING THEM

Abstract:

In this article, there is a way to organize the educational process based on modern methods and didactic games examples of tools are provided. The need to take into account the psychological and age characteristics of students in the use of didactic tools is proven on the basis of examples. Effective methods and means of organizing the lesson process are presented.

Key words: education, scientist, position, technology, picture, spirit, technological map, infographic, competence, media product, rubric, qualification

No educator is capable of creating completely new methods of education. The problem of improving methods is always present, each educator solves it according to his own ability, depending on the specific conditions of the educational process accordingly, he enriches the general methodology based on the expression of his private views. Such private improvement of educational methods is called educational methods. Educational methods are a part of the general method, a separate action, etc identification. Figuratively speaking, methods are an unexplored path that a teacher paves the way with his students in order to achieve the set goal faster. If other educators start to use it, then gradually the methods are wide columnar paths can become methods. Knowing the methods and methods of education, mastering the ability to use them correctly is one of the important characteristics that determine the level of pedagogical skills. That is the relevance of educational methods and methods. In practice, the concept of educational tools is also distinguished. Methods mean a unit of influence, and a tool means a set of methods. A tool is a method neither nor method. For example, work is a means of education, but showing it, evaluating work, showing mistakes in work are methods. Word (in broad sense) - educational tool, but replica comparison - methods. In this connection, educational methods are sometimes defined as a system of methods and tools used

for the successful implementation of a set goal. Also, methods and tools will definitely be present in the structure of the method.

These include multimedia and video lessons of various forms in today's modern world, of course. technical and software tools that allow is a set. Multimedia is a rapidly developing modern information technology. Its distinguishing features include the following:

- various types of information: integrates traditional (text, tables, decorations, etc.), original (speech, music, clips from video films, TV frames, animation, etc.) types in one software product. Such integration includes various devices for recording and displaying information: microphones, audio systems, optical CDs, televisions, VCRs, video cameras, electronic performed under computer control using musical instruments;

The "Human Factor" is certainly at the core of many reforms implemented in our country, at the root of the measures and large-scale work. Making fundamental changes in the life of our country with the initiatives of our country's president Sh. Mirziyoyev In order to continue, the issue of implementing the great responsible task of laying the foundation stones of the III Renaissance together with the representatives of every field, the passionate and selfless people of their country, demonstrates its relevance and importance even more deeply. The essence of the educational process is a person, his harmonious development and well-being in all aspects, the creation of conditions and effective mechanisms for the realization of personal interests, changing the patterns of outdated thinking and social behavior is considered as the main goal and driving force. In our country, great importance is attached to the content of education and its effectiveness, and new editions of the state educational standard curricula are being put into practice as an experiment.

In the design of "Education" classes introduced in schools, in order to fully inculcate its main ideas and goals in the minds of students, it is important to organize classes on the basis of an individual approach to each student, based on the age and physiological state of the students. earns. If we look at the "Education" books that are used in practice, the minimum qualification requirements for a graduate of primary grade (A2), ninth grade (A2+), eleventh grade (V1) , competencies, assessment we see that it is compatible with the order and educational programs, and that each stage includes types of spiritual-ethical, thinking, legal, civil, economic, physical, ecological, and aesthetic education. At each stage, students are taught

national and universal values to educate in the spirit of respect; Family and school in the education of students to strengthen mutual effective cooperation, to support the formation of respect for parents, representatives of other nations and cultures based on the universal principle; protecting children's rights and ensuring their legal interests, inculcating national values based on the principle of "from national recovery to national growth" we can see. Currently, the tasks that are required of us pedagogues are the following:

- students in all aspects, physically, mentally, spiritually and morally adaptation to social life through development and teaching to make the right decision in various complex situations; formation of active civic positions in the child;
- in addition to explaining that world religions are a spiritual value that has been passed down from generation to generation for many centuries, explaining that no world religion promotes the ideas of violence, terrorism and extremism;
- cooperation with social and educational institutions in personal activities strengthening; It is gratifying that it is a suitable auxiliary guide in our tasks, such as working individually with children who have moral and ethical problems or gaps in their upbringing, or children from troubled families, who are prone to crime, or who are on the preventive list. .

Formation of an active citizenship position in education students, It serves to support their comprehensive socialization, effective cooperation, meaningful organization of time, respect for national, spiritual and universal values, and realization of their intellectual and creative potential. In addition, to provide students with quality education, to direct them to the right path of education, to help them acquire the necessary knowledge and life skills, to adapt to independent life, in various situations decision-making based on legal and moral criteria it is rich in interesting and psychological-pedagogical materials, aesthetically modernly decorated, aimed at forming their skills. The educational-methodological complex is the main part of the state policy in the field of education created on the basis of principles; mental and physical capabilities, age, psychophysiological characteristics, level of knowledge, interests, abilities of students are taken into account; aimed at forming a sense of patriotism and national pride in students; that the required volume of general secondary education is provided, orientation to the development of independent creative thinking, organizational skills and practical experience skills in students;

The content consistency of the topics, the effective use of advanced pedagogical technologies, and media products deserve recognition.

Illustrations in the form of pictures: maps, drawings, schemes, the fact that it is decorated with media products consisting of tables, diagrams, photos, infographics, and that it is expressed in the form of new concepts, terms, rules, definitions, and similar dictionaries that correspond to the level of psycho-physiological development of students further expands the sphere of influence of the science. The fact that it reflects the latest achievements of science and technology, educational science. The content integrity of the subjects is ensured, the subject subjects are described in a simple, simple, understandable and fluent language in strict compliance with the rules of the literary language, and the content is covered in a logical sequence and consistency, which further strengthens the mastery of the subject. With appropriate illustrations that do not contradict the mentality of the Uzbek people enrichment, clear expression of questions and tasks, the use of pedagogical technologies in teaching students to think, write, describe, draw, calculate, perform practical work, conduct experiments is intended to educate students in the spirit of patriotism will help more. It is not allowed to express the same concept with two different terms, ambiguity in quoting dates, text and pictures to guide students to a successful social life, explanatory dictionary, the fact that it includes design and modeling tasks aimed at developing technical creativity, logical and innovative thinking, helps the child adapt to social life and expand his worldview.

In the educational process, attention to the use of interactive methods, innovative pedagogical technologies and information technologies in the educational process is increasing day by day. One of the reasons for this is that until now, in traditional education, students were taught only to acquire ready-made knowledge, but modern technologies teach them to deeply master the acquired knowledge, to study and analyze independently, and to draw great creative conclusions. it will In this process, the teacher creates the conditions for the development, formation, learning and upbringing of the individual, as well as performs the function of management and guidance. Educational lessons should be in the form of creative, non-traditional conversations, games, in the family, in nature, debates, discussions, meetings.

What should be considered when using pedagogical technologies in education classes:

1. Clarity of the educational goal in the lesson;
2. Compliance of the content of the pedagogical technology with the requirements of the current period;
3. Didactic rules in the process of pedagogical technology;
4. Teacher's skill technique.

When using pedagogical technology, the teacher must follow the following rules:

1. Introduction of innovations in the field of didactics that have been tested and experienced based on the practice of modern education;
2. Continuous updating of educational content. To study carefully without being indifferent to educational programs;
3. To study new creations in the field of general and national values;
4. Optimizing and activating the activities of the teacher and the student during the educational process. Expanding their internal mentality and level of education.
