

USE OF MODERN TECHNOLOGIES IN LEARNING ENGLISH

Azimbayeva Ranokhan Yuldashevna

Associate professor of the Tashkent Financial Institute,

A teacher of the Department of Foreign Languages

Annotation:

The correct formation of knowledge, lexical, grammatical, and pronunciation concepts in the educational process, the correct content of the system of knowledge, self-control skills in the student's mind is the result of innovative pedagogical technologies. is a component. Currently, the most effective teaching methods in the educational process, which are guaranteed to achieve the goals set by teachers and pedagogues, form the basis for students to think independently, make independent decisions, solve their problems, and get out of various situations without difficulty. such teaching methods capable of being prepared are the most advanced features of pedagogical technology.

Key words: English language, modern methods, information technologies, interactive methods, educational technologies, pedagogical technologies.

Today, with the initiatives of our president, great attention is being paid to language learning in our country. If we look at the above, we will once again be convinced of how important language is in the development of our country. Today, the ability to know foreign languages is becoming one of the integral parts of professional education. Due to the high rate of cooperation with foreign partners among specialists in various fields, their demand for language learning is high. In modern society, foreign languages are becoming an important component of professional education. People learn such knowledge first at school, college, lyceum, and then at institutes, training courses, or independently by getting acquainted with the basic information sets that help to learn a foreign language. Today, there are large collections of educational materials for people with different levels of language skills. Success in achieving this goal depends on the practical methods and skills of teachers. The ability to use information technologies and modern teaching methods helps to quickly understand new materials. By combining different methods, the teacher is able to solve specific educational programs. In this regard, teachers and students should familiarize themselves with modern methods of teaching foreign languages. As a result, the ability to choose the most effective methods to achieve

one's goals is formed. The use of several methods of teaching and learning will give effective results. Teaching is carried out in small steps and is based on the student's existing knowledge system. As time progresses, innovations in every field are increasing. Different styles are also emerging in language teaching. A step-by-step approach to teaching English based on the learner's potential, level, and age gives good results. In this case, students are divided into groups based on teaching at the primary level, teaching at the middle level, and teaching at the higher level. A special program is developed by the teacher for each stage. At the initial stage, special attention is paid to pronunciation. According to Harmer, the first requirement of native speakers during the conversation is pronunciation. At the beginning of the learning process, the teacher should focus on the student's pronunciation. Grammar and vocabulary are important, but if the speaker's pronunciation is wrong, it's all worthless. Native speakers can understand the speech even with grammatical errors if the speaker pronounces the words correctly. Therefore, the main focus in teaching is on pronunciation. In this case, using different audios of native speakers gives good results. The teacher should teach the correct pronunciation of letters and words during the lesson. At the initial stage, great attention is paid to the development of oral speech and reading techniques. If we consider the types of speech activities of teaching a foreign language, it is necessary to perform the following tasks when teaching them:

- a) Creating a reading mechanism;
- b) Developing oral reading techniques;
- c) Teaching to understand what he has read.

After our country gained independence, interest in teaching foreign languages increased and many opportunities were created for young people. As our first president Islam Karimov said, "Currently, teaching foreign languages is given great importance in our country. This is certainly not for nothing. Today, there is no need to overestimate the importance of perfect knowledge of foreign languages for our countries, which are striving to take their rightful place in the world community, for our people, who are building their great future in solidarity and cooperation with our foreign partners. As a logical continuation of these thoughts, the Presidential Decree "On measures to further improve the system of teaching foreign languages" adopted on December 10, 2012 expanded the opportunities for learning foreign languages. In our republic, new methods and requirements have been developed in accordance with the recommendations of the European Framework of Reference for Languages (CEFR) for foreign language teaching and assessment of knowledge and skills of

foreign language teachers. According to it, textbooks were created for students of general education schools and vocational colleges. In accordance with these requirements, classrooms were equipped with stands and new information and communication techniques.

The demand for learning a foreign language is increasing day by day. Foreign language science is divided into four aspects (reading, writing, listening and speaking), and separate concepts and skills are given for each of them. Educational technologies are effective use of modern information technologies in the educational process. It also provides for increasing the quality and efficiency of education by introducing modern innovative technologies into the educational process. In particular, there are several advantages of using such information and communication technologies in learning a foreign language. The role of modern technology in language learning and teaching is incomparable.

The use of technological tools is useful in every aspect of learning a foreign language (reading, writing, listening and speaking). For example, in order to listen and understand, of course, this process cannot be carried out without a computer, a player, and CDs. Listening comprehension is one of the most important parts of language learning. At the same time, the reader is required to pay attention to the speaker's pronunciation, adherence to grammatical rules, vocabulary and its meanings. An important factor in the use of modern technologies in the educational process is that students know information and communication technologies well and are able to use them. Teaching and learning a foreign language using modern technologies is one of the most fruitful ways. In this process, among other things: - when using computers, the student can watch and listen to foreign language videos, demonstrations, dialogues, movies or cartoons; - it is possible to listen and watch foreign language radio broadcasts and television programs; - use of tape recorders and cassettes, which are considered a more traditional method; - CD players can be used. The use of these technical tools makes the process of learning a foreign language more interesting and effective for students [1]. Today, teaching through interactive games is becoming a tradition in schools.

It is known that the lesson is conducted on the basis of various games, which ensures that students demonstrate their capabilities, concentrate, improve their knowledge and skills, and become stronger. The basis of the use of game technology is the activity that activates and accelerates the student. According to psychologists, the psychological mechanisms of playful activity rely on the fundamental needs of a person to express himself, find a stable place in life, self-control, and realize his

potential. Any game should be based on generally accepted educational principles and tactics.

Educational games should be based on educational subjects. In the process of games, the student is more interested in this activity than in a regular lesson and works freely. It should be noted that the game is, first of all, a method of teaching. Pupils participate in game lessons with interest, strive to win, and the teacher also provides education to the pupil through them. The student believes that he can speak, listen, understand and write in Italian while playing games, and is interested. We know that in the current educational process, the student should be the subject. Focusing more on interactive methods will increase the effectiveness of education. One of the most important requirements for Italian language classes is to teach students to think independently.

The "chain of stories" (storia a catena) method helps to develop students' oral speech; - "Role-playing games" (agire personaggi) this method can be used in all types of lessons. In order to teach the profession, people in professions such as "Interpretatore", "Traduttore", "Scrittore", "Poeta" can participate in the class and talk with the students; - "Meeting of Allos" (Incontro pensatore). Poets and writers such as D. Alighiere, A. Navoi, Bocaccio can be "invited". At such a time, using the wise words they said in the lesson will help young people to be educated as perfect people; - "When the pictures speak" (Quando dipinti parlano) method is very convenient and helps to teach the Italian language and develop the oral speech of students, for this it is necessary to use pictures related to the topic; - Quiz cards are distributed according to the number of students and allow all students to participate in the lesson at the same time, which saves time. As we have seen, each innovative technology has its own advantages. In all such methods, cooperation between the teacher and the student, the active action of the student in the educational process is envisaged.

In conclusion, as a result of using innovative methods in Italian language classes, students' logical thinking skills develop, their speech becomes fluent, and the ability to answer quickly and correctly is formed. The student tries to prepare thoroughly for the lessons. This makes students active subjects of the educational process. Since the educational system has the task of educating a free-thinking, well-rounded and mature person, in the future, we future teachers can make our contribution by developing ways to effectively use innovative technologies.
