Annotation

In the first phase of the development of ecological culture, attitudes toward nature in secondary schools, To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Kingdom Service Worldwide has been prepared.

Keywords: Ecological culture, ecological education, ecology, ecological and self-discipline, family ecological upbringing, attitude toward nature, concepts of "human-nature-society,"

LOG IN

The goal of ecological education and upbringing in the family is to educate and educate a person from the time he set foot in nature, It involves using nature intelligently throughout their lives, encouraging our people to use nature intelligently throughout their lives, to promote the traditions, customs, traditions of their original younger generations with respect and respect for nature, to increase their natural resources, to establish gardens, rogs, and flowers, and to awaken good qualities in its heart.

In the process of ecological education, young people are taught to transcend the riches of nature and to protect nature.

The main purpose of ecological discipline is to improve the culture of ecological literacy of society's people, to protect nature by the efforts of such ecologically cultured, educational and educated people, to keep them clean, to awaken love for animals, birds, and plants.

ADABIYOTLAR SHARHI

In many ways, what kind of person a person grows up to be depends also on family upbringing, the responsibility of parents, the extent to which he or she follows them in life, knowing the general laws of child rearing, and parents are responsible to

society for the upbringing of their children. Parents are considered the main educators of their children. Therefore, they should raise their children as virtuous, knowledgeable, and ecologically civilized individuals in the spirit of the best traditions and family traditions of their people.

RESEARCH METHODOLOGY AND EMPIRICAL ANALYSIS

Today's children will have to constantly face changes in social, political, ecological, scientific, technical and industrial fields, no matter where they live. The development and growth of the baby is a continuous process. During this time, we observe his formation as an individual, his desire to understand the universe for the first time through surrounding artifacts and materials, and his desire to find meaning in it on his own, and his interests and feelings. Each period of life has its own stages according to its development features and needs.

During the years that followed, with the help of our President, the reforms that are being undertaken in our country's education system have been bearing fruit. To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled Charitable Planning to Benefit Kingdom Service Worldwide has been prepared. Activities undertaken to strengthen the physical and technological base of educational institutions and improve the quality of the learning process are at the bottom of the reforms that are taking place in the education system is the essence of it. (Matthew 24:14; 28:19, 20) Indeed, consistent reforms in the education system not only improve the quality and content of teaching but also promote ecological culture in students. Knowledge of ecological standards will be of great importance to the younger generation.[1] 2]

In any historical period, people had a relationship with nature. The writings of Oriental hypocrites emphasize the qualities of righteousness, purity, cleanliness of the environment, and love for nature. Our compatriot Ibn Sino put forward the theory that "when there is no cave in nature, people's lives will be extended further." Czech teacher Ya. A. Komensky tried to scientifically establish the essence of the teaching process in the XVII century. He founded the idea that a child's mental and physical growth is in accordance with the law of nature.[[5]

An individual is a social being that is formed as a result of discipline. Many qualities of an individual are not separated, but strongly interconnected. In the process of tarbia, a child's personality develops in a holistic way, not some. As a child grows up and develops, the tasks of upbringing become complex, deepen, and

distinguished.

Educating a mature person in all aspects requires consistently developing and following the ideas of this system, providing him with mental, intellectual, political, moral, labor, aesthetic, physical, ecological, economic, and legal education, the unity of students' minds, behavior and activities, as well as the addition of single, grouped, and public forms of organizing the educational process.

Ecological discipline is considered another important component of social education. Mental, moral, labor and aesthetic discipline cannot be imagined without an ecological culture. The formation of an ecological culture in students has a profound effect on the development of moral appearance, positive behavior, and the development of their artistic abilities. Teaching such subjects as natural science, biology, and geography in a free education system is a means of effectively promoting ecological discipline. To assist individuals desiring to benefit the worldwide work of Jehovah's Witnesses through some form of charitable giving, a brochure entitled *Charitable Planning to Benefit Kingdom Service Worldwide* has been prepared. It is necessary to form an ecological culture.

CONCLUSIONS AND DISCUSSIONS

(Matthew 24:14; 28:19, 20) Today, a sharp rise in air temperatures worldwide is observed. This is one of the main ecological problems of our state. To address and prevent ecological problems, it is necessary to increase the ecological culture and minds of the population and to improve their relationship with nature. Also, in order to improve ecological culture, it is necessary to educate our young people more about ecology and ecology-related subjects in school education.
