A foreign language is a language that is not the native language of people. A person can learn a foreign language only by studying - in schools, language courses and self-taught ways - or through playing as a child living in a foreign language area. It is important to know at least one foreign language at work and anywhere.

The adoption of digital technologies is faster than the introduction of other innovative developments in the history of mankind: in just two decades, digital technologies have managed to cover almost 50% of the population of developing countries and transform societies with their help. The use of technologies that improve communication and access to financial, commercial and public services can lead to a significant reduction in inequality among the population. In the field of education, the provision of virtual learning environments and distance learning has enabled students who could not participate in the programs. In addition, the use of blockchain-based systems will make public services more accessible, increase the accountability of institutions that provide them, and processes will become less bureaucratic due to the use of artificial intelligence. Big data can also contribute to the development of more flexible and precise policy strategies and programs. The use of algorithms can increase human and systematic error, and even amplify it in cases where they contain data that do not initially reflect different realities. Thus, the lack of diversity in the field of technology can lead to a less effective solution to this problem.[1]

Today, one of the main requirements of the education system is the perfect knowledge of foreign languages and digital technologies. It is important to further increase the interest of the young generation in foreign languages and, in turn, to train specialists who can speak these languages freely and to use digital technologies effectively. It is not for nothing that special attention is paid to learning. Decision PQ-5117 of May 19, 2021 of the President of the Republic of Uzbekistan "On measures to bring the activity of popularizing the study of foreign languages in the Republic of Uzbekistan to a new level in terms of quality" and the President of the Republic of Uzbekistan In accordance with the Decree No. PF-60 dated January 28,

2022 "On the Development Strategy of New Uzbekistan for 2022-2026", as well as the implementation of priority tasks on bringing the field of information and communication technologies to a new level in order to increase, on August 22, 2022, the President's Resolutions "On measures to take the field of information and communication technologies to a new level in 2022-2023" were signed.[2] This decision is of particular importance as it is aimed at developing the education of foreign languages and preparing the growing young generation as mature specialists in accordance with the requirements of the times. In addition, as stated in the 23rd meeting of the President of the Republic of Uzbekistan "On measures to improve the system of teaching foreign languages" on May 6, 2021, there are sufficient conditions for learning foreign languages It is no exaggeration to say that creating and popularizing it is the main task of all leaders, and from 2022, newly hired foreign language teachers will be required to have a national or international certificate of B2 or higher. Learning foreign languages is becoming one of the most important issues in today's rapidly developing era. For this reason, there was a need to develop methods of teaching foreign languages using digital technologies. Knowledge of a foreign language today makes it possible to fully use the Internet and Internet resources without any difficulties, to search for and save the necessary information. Nowadays, learning with the help of digital technologies has become an integral part of our life. Learning foreign languages using digital technologies is expanding the scope of language learning and increasing the interests of language learners. These digital technologies not only provide quality knowledge, but also create skills to find independent information and apply it in their activities in the future. The use of digital technologies in learning foreign languages has several advantages. The main advantages of digital technology are the ability to see, listen and talk, and control learning. The use of such technologies increases the level of learning foreign languages and helps to form reading skills. In addition, they can strengthen their knowledge through software tools created in the form of various computer language learning games. It will be possible to achieve development and progress only when new ideas and technologies are used in teaching English.[3] There is no doubt that if they are followed during the training, it will have a good effect. The purpose of using additional text teaching technology is to familiarize students with the most general ideas in education. This technology reflects a person-oriented approach, it is possible to achieve productive, positive results only when each student acquires knowledge, skills and abilities, but also takes into account the individual

characteristics of his development. in order to be effective in reality, it is necessary to create conditions for independent education of students by using computer technologies in class. Recently, attention is being paid to the use of this method in training sessions. Relying on the latest advanced methods, we understand the formation and improvement of students' speaking skills as the independent education of students in English language classes, independent education related to the development of their speaking skills in a certain order with the given task. learning foreign languages and effective use of digital technologies is the demand of the current era, scientists should develop new methods of language learning for the young generation based on the "National Personnel Training Program" and recommend them to the study process. is one of the urgent issues facing experts. In order for our talented young people to become mature specialists in their fields of interest, first of all, it is necessary for them to have excellent knowledge of foreign languages, including English, and the use of digital technologies.[4]

### Conclusion

Therefore, extensive use of digital technologies in teaching foreign languages, ensuring that teaching methods meet the requirements of the time is the main task of professors and teachers that cannot be delayed.
