Аннотация

Ushbu maqola ingliz tilini o'qitishda o'ziga xos xususiyatlaridan foydalanish bo'yicha strategiyalarni aniqlashda shuningdek, ingliz tili asosida veterinariya talabalarining kasbiy psixologik salohiyatini namoyon etish usullarini organishga bag'ishlangan. Maqolada hozirgi kunda ta'lim jarayonida veterinariya mutaxsisiligi talabalariga ingliz tili o'qitishda pedtexnologiyalardan foydalanish va darslarning samarali natija berishi o'qituvchining talabalarni qay darajada qiziqтира olishiga va ularni bilim olishga bo'g'liq masalalar ko'rib chiqilgan.

Калит со'злар: Farmasevtika tarmog'ini rivojlantirish, integratsiyalashuv, sotsiologiyalik kompetensiya, investetsiya, farmasevtika, linguvodidaktika, avtokompetensiya, aksiologik, ob'ektiv fikirlash, kommunikativligi va ijtimoiy lingvistik, hamkorlik, nostandart, takomillashtirish, tayyorgarligini oshirish, anjamlardan foydalanish, ensiklopediyalar, dasturlar.

Аннотация

Данная статья посвящена исследованию способов проявления профессионального психологического потенциала студентов-ветеринаров на основе английского языка при определении стратегий использования его особенностей в обучении английскому языку. В статье рассматриваются вопросы, связанные с использованием педтехнологий при обучении английскому языку студентов ветеринарных специальностей в современном образовательном процессе и эффективностью результатов занятий.

Annotation

This article is devoted to the identification of strategies for using specific features in teaching English, as well as to the establishment of methods for demonstrating the professional psychological potential of veterinary students on the basis of English. The article covers the current issues of the use of pedtechnologiai in teaching English to students of Veterinary Specialty in the educational process and the effective performance of classes to what extent the teacher can Interest students and get them knowledge.

Keywords: development of the pharmaceutical network, integration, sociolinguistic competence, investment, pharmaceutical, linguvodidactics, autocompetence, axiological, objective thinking, communicativeness and social linguistics, cooperation, non-standard, improvement, improving readiness, use of equipment, encyclopedias, programs.

The process of information and integration has become incredibly intensified today, the further expansion of socio-economic, cultural relations between the countries has made the study of foreign languages a vital necessity. Particular attention is paid to research in the direction of developing the ability of young people to learn languages in the world, increasing their social communicativeness and social linguistic readiness, determining the degree of development of sociolinguistic competencies in them, effective use of innovative educational technologies in teaching foreign languages. The period itself assumes the study of foreign advanced experiences, the development of educational technologies corresponding to the time requirement, the manifestation of the intellectual and psychological potential of each individual, the increase of sociolinguistic communicativity of students, the activation of social linguistic training in them. President Of The Republic Of Uzbekistan Sh.As

Mirziyoyev noted: "since we set ourselves the goal of building a competitive state, from now on, graduates of schools, lyceums, colleges and universities are obliged to know at least two foreign languages perfectly. This strict requirement should become the main criterion for the activities of the head of each educational institution. Therefore, in our republic, foreign languages, in particular, English, are taught at all stages of the system of continuing education, from preschool to higher education to advanced training systems, including students specializing in veterinary medicine and animal husbandry specialties.

In this case, before higher education, students are taught English on the basis of one basic program, while in the Higher Education stage, two areas are distinguished by teaching a foreign language for philological purposes, that is, by training future Foreign Language teachers and by directing the language towards specific goals and professions (Language for Specific Purposes, LSP). On the basis of Decree No. 5229 of the president of the Republic of Uzbekistan "on measures to radically improve the management system of the pharmaceutical network", the decree of the Cabinet of Ministers of the Republic of Uzbekistan dated December 18, 2017 "on the development agency of the pharmaceutical network" under the Ministry of health of the Republic of Uzbekistan " on:

- assistance to domestic manufacturers of medicines, medical products and medical techniques in the organization of cooperation with leading foreign pharmaceutical companies;
- Organization of cooperation between domestic manufacturers and leading foreign companies;
- ensure the participation of representatives of local organizations in international pharmaceutical exhibitions, forums, conferences, seminars and national exhibitions held in foreign countries;
- participation in the work of international organizations, intergovernmental commissions (groups) and business forums is defined as the main tasks of the agency. These tasks clearly show how important it is for pharmacists to have professional-field competence in a foreign language in providing the population with quality medicines. The decree of the president of the Republic of Uzbekistan dated April 10, 2019 "on measures for the further rapid development of the pharmaceutical sector of the Republic in 2019-2021"PF-5707 also emphasized the rapid development of the pharmaceutical sector, attracting foreign investments and

leading foreign companies to the implementation of investment projects, promoting the creation of innovative pharmaceutical products, expanding the production volumes and export potential of domestic:

- the development of the domestic pharmaceutical industry, increasing its share of penetration into the world market;
- creation of free economic zones specializing in pharmaceutical;
- to strengthen relations with foreign investors and expand the import of investments;
- international correct compilation of instructions for new drugs of the clock;
- the use of laboratory jigsaws and equipment is imposed on such tasks as being able to use the instructions of the router.

In ensuring the implementation of these decisions and decrees, the study of a foreign language, especially English, by students of the direction of Veterinary Medicine and pharmacology is of great practical importance in their foreign relations and internal activities in our country. In particular, the fact that the main part of the terms related to the field of pharmacology are borrowed from Latin, medicines from different countries are brought to our republic, as well as the need for veterinarian doctors, doctor-provisioners and pharmacists of the field to regularly keep abreast of news about this area presupposes the good knowledge of English by future pharmacists. More than 100 pharmaceutical enterprises are currently operating in our country.

Foreign investment in the sector is increasing from year to year, large-scale measures are being taken to provide our people with quality medicine, further development of the pharmaceutical industry. Today, the presence of direct contact with foreign countries, the rapid development of education and science in the field of Veterinary Medicine and pharmacy makes it necessary for future pharmacists to collect information about the field, read the necessary information in the original, study the terms related to medicine and use them in the professional field. This necessitates the development of knowledge, skills, qualifications in English of Veterinary Pharmacist students. It can be seen that the training of students in the pharmaceutical direction to conduct free communication in English is of important practical importance in the formation of their professional competencies, helping to further strengthen the scientific, professional-field knowledge of students in the direction of future veterinarians-pharmacists and veterinary medicine and cooperation with foreign countries. It should be noted that to date, the pharmaceutical industry is

incredibly developing. However, most of the literature on laboratory equipment used in the manufacture of medicines is shop in English.

With the development of the higher education system, its competitiveness and, most importantly, the increase in the number and quality of new technologies associated with the acquisition of high knowledge, skills and qualifications of trained personnel, the continuous growth of the population on a global scale, the importance of Independent Education is also growing. "Today, Education assumes the need to enrich the development of student intelligence with various institutions and styles, not limited to the development of the system, its narrow classes or practical processes in audtioria. One of the important indicators of a person's professional competence, competence is the ability to receive an independent education, which is manifested in his desire for growth, self-improvement, " emphasizes the Russian scientist Ye. Bryazgunova. It can be seen from this that a greater emphasis on independent learning is an extremely important feature in language learning. In the field of Veterinary Medicine, as well as in the field of veterinary pharmacy, there is a direct connection with Latin in teaching English, the Uzbek scientist M. In the scientific research work of N Israelova on the teaching of Latin terms in the medical direction, the textbooks " Latin in English ", " English grammar for students of Latin " emphasize the need to learn English by analogy with Latin, from similarities in nouns, verbs, adjectives and prepositions, to compare possessive, complements, possessive and diminutive pronouns .

Currently, the possibilities of independent language learning or teaching (engaging in language teaching activities) in the field of foreign language learning are increasingly relaxed due to online courses organized by Moos (massive open online courses), various internet encyclopedias, programs, universities, institutes, special centers. In addition, online courses organized through television and radio, the internet, are becoming more and more so that special methodologies for language learning or teaching are being developed and offered for learning. It is not even necessary to leave the House today to acquire the appropriate certificate from the student or language learner, mastering some language, mastering it carefully, proving it in practice or clarifying its degree. Anyone who aims to learn any language can do it in their free time and using online courses based on the opportunity and need to learn. Another convenient thing about this is that those who set themselves the goal of learning a language a few years ago had to spend a lot of

money, while today it is not necessary to spend such a large amount. Such opportunity and competition, in turn, is significantly “encroaching” on traditional education and its institutions. After all, “the essence of independent education means that the employee receives education to satisfy the activity, need for awareness in self-expression through continuing education”. Among these in the conditions of our republic, students in the fields of veterinary medicine, pharmacology should also be recognized the need for a good knowledge of modern information technology and competency to apply foreign languages in the field. . From the existing points of view, we believe that the professional competence of students of the direction of veterinary medicine, pharmacology is knowledge, qualifications and skills related to the specialty of Veterinary pharmacology and veterinary medicine, as well as the possession of the necessary personal qualities for dorishunos of the same field, as well as the ability to use modern information technologies and.

Also, the practical (knowledge, qualifications, skills), axiological (personal orientation to the profession), hissiy (self-management), autocompetence (ability to use technologies), special competency (acquisition of professional tasks) components that develop the professional competency characteristics of students of the direction of future veterinary medicine, pharmacology, pharmacy are common factors in the formation of their communicative competencies.

One of the main principles of professional linguodidactics, which arose due to the theoretical and methodological need to teach foreign languages as a branch of linguodidactics, depending on the profession and industry, is the teaching of English in connection with specialist subjects, in particular, the teaching of English in the fields of veterinary medicine, pharmacology and other areas of this field interdisciplinary communication in teaching leads to a wealth of specialist knowledge, awareness of the latest innovations in the field and contributes to an increase in student motivation, the formation of practical, axiological and special competencies in them. The role of Independent Education is also very important in this process. Today, the main task of Independent Education is to maximally prepare an individual for life, form self-development and improvement skills, objectively think in non-standard situations and encourage him to correctly assess it. “Self-improvement is” the process of conscious management of the development of one's own qualities and abilities“, ”leaving today behind with the awakening of one's

aspirations, achieving great results, improving one's own skills, gaining the necessary personal qualities for oneself". As you can see, the result of continuous independent education is the work and constant improvement of the future specialist, professional and generally human professional self. It is the realization that independent education has no opportunity without the skills of being able to accurately formulate the goal, fully see the problem and concentrate on the most important details, creative reanalysis of the process of learning and learning. The Independent Education of a person is based on the careful planning of human activity, its high-priority goals, the tasks set before him, in addition to the purposeful, realized characterizing profession. Although there is one nesha noted, it can be said that another main goal of Independent Education is to expand and deepen theoretical knowledge based on modern professional requirements, improve existing knowledge and skills, acquire new knowledge and skills. In essence, independent education means mental work, the skill of troubleshooting, the acquisition of techniques and culture of working not only on personal improvement, but also on professional growth. A person with the ability to work independently and receive education is able to conduct purposeful scientific and practical, research activities, and this testifies to the fact that he has a high professional level, the potential to conduct professional activities.
