EFFECTIVE METHODS OF TEACHING A FOREIGN LANGUAGE

Kakhramonova Dilorom,

Senior teacher of the Department of Language Studies,
Tashkent Academic Lyceum No. 1 of the Ministry of Internal Affairs
of the Republic of Uzbekistan

Annotation

The article highlights the ways of the English language teacher to improve the quality of education through the use of innovative methods.

Keywords: school, innovation, pedagogue-technologist, method, education, training, knowledge, skill, creative, classification, innovation, objective.

Implementation of the developed experiences of pedagogy and achievements in education is one of the important conditions of today. Currently, a huge base of experience that a teacher can use during his career has been formed, and it is getting richer every day. However, it is difficult for teachers and future professionals to learn these experiences. The position of the teacher is particularly important in creating best practices and popularizing them among colleagues. Educators should consider the cost and effectiveness of new pedagogical practices when implementing them. The orientation of the teacher's practical activity to innovation provides an opportunity to put into practice the achievements made as a result of theoretical pedagogical research. At this point, a question arises: "Who are the communicators and promoters of advanced pedagogical ideas and technologies to the general public?" Professors of higher education institutions, senior pedagogues working in universities play an important role in researching and popularizing the experience of a particular pedagogue or educational institution.

The reason for this can be explained as follows:

- the author of the innovation cannot give a necessary and accurate assessment of the prospect of a particular pedagogical idea or innovation;
- advanced pedagogues do not always think about popularizing their ideas. The reason is that innovation requires additional time and labor of the pedagogue;
- the idea is not always scientifically and methodologically justified by its creator;

- the authors face obstacles related to the individual characteristics of themselves and their colleagues in describing their innovations and ways of their implementation;

- the task of not only promoting and popularizing pedagogical innovations, but also making corrections to the quality of pedagogues based on them and enriching the professional knowledge and skills of future teachers is entrusted to the creative group;

- the tasks of systematic selection of innovations, monitoring, evaluation of innovative ideas, technologies, enriching the work experience of higher educational institutions are also carried out by the members of the creative group. ¹

The author of the innovative idea does not participate in the management of activities aimed at implementation. This kind of approach creates a basis for expanding the capabilities of an innovative pedagogue and directing him to a specific goal. In this way, the powers of the founder and popularizer of innovative pedagogy are concentrated in one point and directed towards a certain goal. Pedagogical innovation has its own dimensions. Pedagogical innovation consists of the following dimensions that shape the creative activity of the future teacher: how new the innovative methods are; its optimality; how effective; possibility of application in mass experiment and so on. The main measure of innovative methods is their novelty, results of scientific research and equality with advanced pedagogical experiences. Nowadays, it is very important for everyone to know foreign languages. The world is becoming more and more globalized, and knowing two languages is not just an interest, but a requirement of the times. Learning foreign languages is a life skill that focuses on learning how to communicate and connect with others. Why should we learn foreign languages? I will now write about why you should learn foreign languages. Learning foreign languages increases our knowledge. No matter how old you are, learning a second language has shown significant benefits. Studies have shown that bilingual people have more active brains, better memory, more creativity, better problem solving, and more. These advantages make it easier not only to learn more languages, but to learn anything. The ability to switch tasks quickly is especially important in today's busy, task-oriented world. Bilingual tasks

can be switched much faster than their monolingual counterparts and many important tasks can be performed simultaneously. Traveling becomes cheaper and easier when you learn a foreign language. Of course, many people like to travel. Knowing a foreign language will be of great benefit to you when you go to foreign countries. You can easily explain the food you want when you go out to eat. You can avoid difficulties by asking local people around you for directions. If you were to take a guide with you, it would be more expensive. Learning a foreign language opens up a world of employment opportunities. It's no secret that learning a foreign language can improve your job prospects. More companies than ever are operating in multiple, often dozens, countries around the world. But they speak at least one foreign language they can't do that without calling people who understand them to work. Even at small local companies, the ability to speak a second language is likely to set you apart from other potential employers. It gives you the opportunity to make new friends while learning a foreign language. Meeting new and interesting people and developing lifelong friendships are definitely goals worth pursuing. And learning another language is a sure way to speed up this process. Language helps us express our feelings, desires, and connect with other people around us and forms meaningful relationships. Learning a foreign language encourages you to be more open-minded. Learning a foreign language and immersing yourself in a completely new culture and worldview is the surest way to become an open-minded, understanding, tolerant person, and it's absolutely priceless. It's a fantastic, eye-opening experience to see the world from a different perspective and understand where you and others are coming from. Learning foreign languages helps you to better understand your own language and culture. Learning a foreign language actually engages you in reverse psychology and helps you better understand your native language and culture. This is one of the most unexpected benefits of learning a foreign language. You will become more aware not only of cultural customs, but also of the grammar, vocabulary and pronunciation patterns of your first language. Implementation of the developed experiences of pedagogy and achievements in education is one of the important conditions of today. Great experiences that a teacher can use during his career base has been formed and it is getting richer day by day. But despite this, these experiences are used by teachers and future professionals their assimilation is carried out with some difficulty. The position of the pedagogue is especially important in creating best practices and popularizing

them among colleagues. The educator should pay attention to the cost and effectiveness of the new advanced pedagogical practice. The orientation of the teacher's practical activity to innovation provides an opportunity to put into practice the achievements made as a result of theoretical pedagogical research. In order to popularize the results of such studies, it is necessary to introduce them to the general public. Such news can be conveyed to representatives of other pedagogies by providing quick advice, conducting special seminars and trainings, giving speeches at conferences, and giving future pedagogues a series of lectures. During my pedagogical practice set by the institute, I observed that several new methods should be used for effective learning of English by students at school.

I understood. If the experiment is new for one teacher, it may not be new for another. In addition, the level of innovation of the same method may be different for future pedagogues. Taking this into account, both future pedagogues and teachers working in the educational system should approach innovative creative activities based on their needs. The creative pedagogical activity of the teacher is the process of positively solving tasks subordinated to the formation of human consciousness and behavior, and most importantly, the creation of a generation of well-rounded people. Every English language learner, whether native or not, is familiar with at least one classic jingle. Yes, we refer to the ABCs to remember which letter comes after Q. Although the middle section (something about eliemenopee?) requires a bit more brain power, the song offers English speakers a convenient reference point for all their alphabet needs. Converting vocabulary, grammar and dialogue into catchy tunes is a great way to teach English to young learners. If you're looking at generic material, try checking YouTube to see if there's a suitable song out there.

Alternatively, you can tap into your inner Beethoven to create a musical masterpiece using the melody of another easy song like Twinkle Twinkle Little Star In conclusion, in order to educate mature specialists who have a high level of general-professional culture, social activism, independent thinking, and the ability to solve their tasks without difficulty, today our pedagogues use modern and innovative pedagogical technologies. the main factor of improving quality and efficiency they should understand that, and that this is what the times demand. In conclusion, knowing English is the key to new opportunities for every industry representative. If you know your field well, one door will open, if you also know English, another door will open. Knowing a language opens the door to the whole world.
